ACADEMIC PROJECTS

M.Tech.

Project Title: “Dynamic load balanced multicast for data-intensive application on Clouds”

Platform: Windows XP

Language: Java

Cloud Computing is fast emerging as the preferred technology by many organizations to save cost and optimize business operations. Any user can able to store his huge amount of data in cloud and he can the retrieve it as and when required based on two algorithm. So there is a need to propose an effective scheme which supports to access cloud information most efficiently and reliable. In this project flow of data between the cloud server and client is carried in a most effective way.

B.E.

Project Title: A Fully Distributed Proactively Secure threshold-Multisignature Scheme

Language: Java

Threshold-multisignature schemes combine the properties of threshold group-oriented signature schemes and multisignature schemes to yield a signature scheme that allows a threshold (t) or more group members to collaboratively sign an arbitrary message.
