	<b>Ph.D thesis abstract</b>	* Ph.D. Topic “ <b>POTENTIAL USE OF LATERITIC FINE AGGREGATES IN MORTARS AND CONCRETES FOR SUSTAINABLE DEVELOPMENT</b> ”  The main objective is to study the usage potential of processed lateritic FA as a replacement to river sand in conventional mortars and concretes. A new processing methodology is implemented to process and characterize the lateritic FA. Performance of Lateritic FA as fine aggregates in conventional mortars and concretes were studied through mechanical properties and micro structural analysis. The performance of blended lateritized mortars and concretes at elevated temperatures is studied. Performance Studies on usage potential of Lateritic FA along with recycled coarse aggregates replacement to conventional natural granite aggregates was also investigated.
